Revisiting AMD and ARM Estimates Amid Agentic AI Acceleration

Summary

Since publishing our [CPU TAM model in May](#), we sense investors have extrapolated strong near-term demand into more aggressive C2030 TAM outcomes (in some cases we have heard ~\$300B). We have pushed back against these narratives, instead steering such bullish outcomes to a long thesis on MU because we believe DRAM will remain too constrained to enable a TAM that large by 2030. All of that said, we do see accelerating traction in standalone CPU racks with the architectural split we outlined playing out: 1) latency-sensitive head nodes favoring ARM (NVDA Grace/Vera (which we think is gaining traction due to combination of low latency+multithreading with NVDA offering memory as part of the system), Axion, Graviton), and 2) standalone agentic AI racks being more core and throughput-driven — an area where we think AMD has a distinct advantage. We think INTC retains optionality with x86, but mid-term upside hinges on improving its high core-count/performance roadmap. While ARM's Gen1 CPU is better suited for head nodes today, its roadmap (200–500 cores) could become more competitive in standalone use cases over time. Net, we raise estimates for AMD and ARM as key beneficiaries of standalone CPU and head node deployments, and move PTs to \$670 and \$470 from prior \$455 and \$260, respectively.

Increasing AMD estimates on higher share expectations in standalone segment

We are incrementally more constructive on AMD as standalone CPU racks gain traction, given its advantage in core count, multithreading, and x86's historically strong software ecosystem for traditional software workloads that are now increasingly part of the agentic AI workloads. We now assume x86/ARM split for standalone segment of the market at 60%/40% x86 vs ARM and think AMD is in position to capture an outsized share of the incremental demand in light of INTC's roadmap and supply challenges. INTC's recent launch of 288 e-core Clearwater Forest CPU is roughly equivalent in performance (we think) to the low-end (~165 cores) of AMD's p-core Venice platform (which scales all the way to 256 cores). While INTC retains optionality from internal manufacturing, mid-term upside depends on improving its high core-count roadmap and we expect share to continue to significantly tilt to AMD. We are increasing AMD's CPU Server revenues for C26E/C27E/C28E from \$16B/\$21B/\$27B to \$16B/\$23B/\$29B and reaching \$50B in C2030E (vs prior \$41B). We take our PT to \$670 based on an unchanged 35x multiple.

ARM set to benefit from head node market; standalone prospects hinge on future generations

We maintain the view that ARM architectures will represent ~70% share of a ~20MM unit TAM for head-nodes by C2030 – the real investor debate, in our view, is revenue potential for ARM's standalone CPU (AGI). Following a series of expert calls and industry discussions, we emerge slightly more optimistic about its standalone prospects and are raising our estimates for ARM's internal CPU (AGI) slightly from ~\$13B to ~\$14B in C2030. ARM's core competency lies in latency and efficiency – which aligns well with hyperscaler needs – however, current limitations in core count/throughput will limit the use of ARM's internal Gen1 AGI for standalone AI racks because for this application, workloads need to scale across as many cores on a single machine as possible. Over time, we see a path for ARM's roadmap (200–500 cores) to expand into these broader use cases, though we think this likely requires a Gen2/Gen3 product. For a new chip player, we are mindful that ARM's ability to secure excess wafers and support customers with DRAM procurement may be more limited relative to more established peers, and think investors would not mind any potential mid-term gross margin trade-offs to secure

capacity and support LT growth. On the customer side, ARM has highlighted hyperscalers such as META, OAI, and ByteDance but META also continues to rely heavily on AMD, NVDA (and even Google's Axion). OpenAI's trajectory here will, we think, depend in part on SoftBank's role in funding and infrastructure, while ByteDance remains a relatively small contributor at ~4% of global deployments. Net, we are raising ARM AGI revenue to reflect an ~8% share of our \$170B TAM estimate in the C2030 timeframe.

Our thoughts on ARM's CPU royalties

While the standalone CPU opportunity remains a debate, ARM remains strongly levered on the royalty side for head node applications. Much here could depend on the bifurcation of the CPU market between head node and standalone agentic racks as we think NVDA will likely continue pursuing both, but wonder if the other hyperscaler programs may continue focusing on the headnode application as opposed to scaling two completely opposite CPU programs at the same time. NVDA estimates of \$20B CPU chip revenues this year is very interesting to us and we think is likely split ~60% head node and ~40% standalone CPU racks. However, we also note that NVDA and AWS both have early customer royalty rates that we expect to be meaningfully below the \$1/core CSS pricing. We expect royalty rates per device to increase driven by higher core count and royalty per core (the latter likely increasing 2x+ or even 3.5x in our bull case). Our base case C2030 estimates of \$14B in AGI CPU revs and \$4.8B in IP revenues suggest a \$9.95 EPS. We move our PT to \$470 based on a 108x multiple (from 61x).

OUR CPU TAM ESTIMATES AND BOTTOM-UP UNITS BUILD

In our [Exploring the Impact of Agentic AI on the CPU Market](#) note that we published on May 5th, we outlined our view on the CPU market for C2030 reaching \$170B. Over the past 2 months, we sense demand signals have strengthened further, but we think memory demand is likely to be the gating factor.

For our estimates, we have added further details on ARM IP and ARM AGI units and revenues, but think that the potential source of upside to our CPU TAM estimates would be higher than expected growth in the standalone segment. But with higher core count we also see this segment to require a lot more memory vs traditional & head node deployments.

We have updated our view on the standalone subsegment of the CPU market as we now expect x86 (and AMD, in particular) to have a higher share compared to ARM in standalone segment. In our conversation with Rambus (RMBS), the management team suggested that standalone CPUs are largely leaning towards higher CPU core count - consistent with our checks.

Figure 3: ARM Could Reach ~47% Share by C2030E

Source: UBS Research, share based on revenues

We expect agentic workloads to significantly increase the CPU attach ratio, but think that it is too soon to estimate the ultimate attach rate given the lack of maturity of agentic workloads.

We are moderating our estimates for ARM share gains in the standalone segment. Our latest conversations with industry players, including MU and RMBS, suggest that standalone racks are now focusing on higher core count. We sense it might be skewed toward x86.

As a result we slightly tweak our expectations for the total market share for AMD and ARM and now expect ~40% unit share for ARM chips and ~50% of the revenues (in light of traditional market being skewed towards x86 and having lower ASPs).

We are increasing our base case estimates closer to the bull case EPS power estimates based on a \$170B CPU TAM. For AMD we now model \$50B in CPU revenues vs prior estimate of \$41B, reflecting a higher share of the standalone market.

For ARM, we are leaving more upside to our bull case number because of the underlying assumptions on royalty rates expansion for IP revenue. Our bull case numbers showcase IP revenues in a case where the blended royalty rates per core are going to \$1.70, from what we estimate at ~\$0.50 in C2026 and implies per core royalty increase for all customers (including AWS and NVDA). With that, we are taking a more conservative stance in our base case model and our C2030E EPS at \$9.95 is still ~15% below the potential EPS Power.

Valuation

We raise our price target from \$260 to \$470 based on our target PEG of 2.4x (vs. 1.6x prior) and LT EPS CAGR for Arm at 45.2% (vs prior 36.7%); our 2.4x PEG is in line with EDA/IP peers as we think given ARM's IP portfolio and gross margin levels, it is more similar to EDA/IP peers like SNPS and CDNS, but at the same time has a more direct exposure to the underlying semiconductor macro trends - like agentic CPU demand. The 2.4x PEG multiple represents a 108x P/E multiple (previously 61x) which we apply to our CY28E EPS of \$4.33 (unchanged).

We note that 108x P/E is on the higher end of the semis peer group, closer to INTC at 107x NTM PE. At the same time, we think our PT of \$470 applied to our 2030E EPS power of \$9.95 (discounted using a COE of ~10%) reflects a more appealing 45x (or 37x undiscounted) - largely comparable to the broader semis coverage (Figure 30). Even so, we believe there is upside to our royalty rate assumptions - and therefore LT EPS growth assumptions - as ARM holds a monopoly through its IP portfolio in an environment where CPUs are viewed as a potential bottleneck to the \$3-4T AI infrastructure TAM by C2030. We note that ARM's CPU IP royalties represent sub-2% of the CPU ASP and we think in the environment of strong demand as ARM continues to innovate its IP portfolio, it could increase closer to 5% of the ASP.

UPSIDE/DOWNSIDE SPECTRUM

Source: UBS estimates

UPSIDE (\$580): Our upside case contemplates C28 revenue growth of ~44%, leading to non- GAAP operating margin of 52% in 2028 and non-GAAP EPS of \$4.90 as a result. We apply a 119x PE multiple to get to an upside valuation of \$580.

BASE (\$470): Our base case contemplates C28 revenue growth of ~40%, leading to non- GAAP operating margin of 50% in 2028 and non-GAAP EPS of \$4.33 as a result. We apply a 108x PE multiple as ARM is more similar to EDA/IP peers like SNPS and CDNS, but at the same time has a more direct exposure to the underlying semiconductor macro trends - like agentic CPU demand. Net, we derive a price target of \$470.

DOWNSIDE (\$265): Our downside case contemplates C28 revenue growth of ~39%, leading to non- GAAP operating margin of 49% in 2028 and non-GAAP EPS of \$4.16 as a result. We apply a 64x PE multiple to get to a downside valuation of \$265.

Valuation

We increase our PT from \$455 to \$670, based on 35x multiple (unchanged) applied to CY28E EPS of \$18.85 (from CY27E EPS of \$13.15). We roll forward our valuation methodology to CY28 as investors start to look towards AMD's out-year server CPU opportunity, while our 35x multiple is in-line with the median of peers.

UPSIDE/DOWNSIDE SPECTRUM

Advanced Micro Devices Inc - AMD.O Price

Source: UBS estimates

UPSIDE (\$820): In our upside scenario, we assume CY28E total revenue of ~\$110B, driven by +39% Y/Y growth in data center and +12% Y/Y in Client. We see net margin expanding to ~35% in CY28E and apply a 38x P/E multiple to CY28E EPS of \$21.34, arriving to an upside valuation of \$820.

BASE (\$670): In our base case scenario, we assume CY28E total revenue of ~\$104B, driven by +36% Y/Y growth in data center and +10% Y/Y in Client. We see net margin expanding to ~33% in CY28E and apply a 35x P/E multiple to CY28E EPS of \$18.85, arriving to a base valuation of \$670.

DOWNSIDE (\$380): In our downside scenario, we assume CY28E total revenue of ~\$80B, driven by +21% Y/Y growth in data center and +6% Y/Y in Client. We see net margin expanding to ~30% in CY28E and apply a 29x P/E multiple to CY28E EPS of \$13.30, arriving to a downside valuation of \$380.

Valuation Method and Risk Statement

We use various valuation techniques such as P/E, EV/FCF for valuing the companies in this report. Risk factors include but are not limited to macroeconomic factors such as a downturn in the economy, a disruption of international trade, technological disruption due to new inventions, or business model innovation whereby structural changes in the industry alter the future course of unit sales, ASPs, and revenues.

AMD: We value AMD based on a NTM P/E methodology. Upside risks to our AMD thesis include higher-than-anticipated penetration into cloud/data center servers and better traction in AI. Downside risks include margin pressure in the form of aggressive price competition from Intel and an inability to effectively shift production to TSMC in a timely manner.

ARM: Because Arm is growing far faster than many of its competitors, we derive our price target based on a PEG methodology which effectively normalizes P/E multiples for growth. We use a 2.4x target PEG, in line with EDA peers as we think given ARM's IP portfolio and lack of chip portfolio, it is more similar to EDA/IP peers like SNPS and CDNS compared to semiconductor peers

INTC: Our PT is based on a SOTP analysis of the five contributing segments (Intel Products, Intel Foundry, Altera, Mobileye and All Other). NVDA has built a formidable moat for new compute-intensive workloads in the data center and could ultimately leverage its GPU architecture to more broadly displace INTC. New client and server CPUs from AMD also present a threat that we could be underestimating.

Quantitative Research Review

UBS Global Research publishes a quantitative assessment of its analysts' responses to certain questions about the likelihood of an occurrence of a number of short term factors in a product known as the 'Quantitative Research Review'. UBS Global Research: Global Equity Rating Definitions

12-Month Rating	Definition	Coverage ¹	IB Services ²
Buy	FSR is > 6% above the MRA.	54%	24%
Neutral	FSR is between -6% and 6% of the MRA.	40%	21%
Sell	FSR is > 6% below the MRA.	6%	21%

Source: UBS. Rating allocations are as of 31 March 2026.

1:Percentage of companies under coverage globally within the 12-month rating category.

2:Percentage of companies within the 12-month rating category for which investment banking (IB) services were provided within the past 12 months.

KEY DEFINITIONS:**Forecast Stock Return (FSR)** is defined as expected percentage price appreciation plus gross dividend yield over the next 12 months. In some cases, this yield may be based on accrued dividends. **Market Return Assumption (MRA)** is defined as the one-year local market interest rate plus 5% (a proxy for, and not a forecast of, the equity risk premium). **Under Review (UR)** Stocks may be flagged as UR by the analyst, indicating that the stock's price target and/or rating are subject to possible change in the near term, usually in response to an event that may affect the investment case or valuation. **Equity Price Targets** have an investment horizon of 12 months.

EXCEPTIONS AND SPECIAL CASES:**UK and European Investment Fund ratings and definitions are:** **Buy:** Positive on factors such as structure, management, performance record, discount; **Neutral:** Neutral on factors such as structure, management, performance record, discount; **Sell:** Negative on factors such as structure, management, performance record, discount. **Core Banding Exceptions (CBE):** Exceptions to the standard +/-6% bands may be granted by the Investment Review Consultation (IRC). Factors considered by the IRC include the stock's volatility and the credit spread of the respective company's debt. As a result, stocks deemed to be very high or low risk may be subject to higher or lower bands as they relate to the rating. When such exceptions apply, they will be identified in the Company Disclosures table in the relevant research piece.

UBS has policies and procedures, which include, without limitation, independence policies and permanent information barriers, that are intended, and upon which UBS relies, to manage potential conflicts of interest and control the flow of information within divisions of UBS and among its subsidiaries, branches and affiliates. UBS does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision. For further information on the ways in which UBS Global Research manages conflicts and maintains independence of its research products, historical performance information and certain additional disclosures concerning UBS Global Research recommendations, please visit <https://www.ubs.com/disclosures>.

UBS Global Research will initiate, update and cease coverage solely at the discretion of UBS Global Research Management, which will also have sole discretion on the timing and frequency of any published research product. The analysis contained in this document is based on numerous assumptions. All material information in relation to published research reports, such as valuation methodology, risk statements, underlying assumptions (including sensitivity analysis of those assumptions), ratings history etc. as required by the Market Abuse Regulation, can be found on UBS Neo. Different assumptions could result in materially different results.

UBS Global Research may utilise artificial intelligence tools ("AI Tools") in the preparation of this document. Notwithstanding any such use of AI Tools, this document has undergone human review.

The analyst(s) responsible for the preparation of this document may interact with trading desk personnel, sales personnel and other parties for the purpose of gathering, applying and interpreting market information. UBS relies on information barriers to control the flow of information contained in one or more areas within UBS into other areas, units, groups or affiliates of UBS. The compensation of the analyst who prepared this document is determined exclusively by UBS Global Research management and senior management (not including investment banking). Analyst compensation is not based on investment banking revenues; however, compensation may relate to the revenues of UBS and/or its divisions as a whole, of which investment banking, sales and trading are a part, and UBS as a whole.

For financial instruments admitted to trading on an EU regulated market: UBS (excluding UBS Securities LLC) acts as a market maker or liquidity provider (in accordance with the interpretation of these terms under English law or, if not carried out by UBS in the UK the law of the relevant jurisdiction in which UBS determines it carries out the activity) in the financial instruments of the issuer save that where the activity of liquidity provider is carried out in accordance with the definition given to it by the laws and regulations of any other EU jurisdictions, such information is separately disclosed in this document. For financial instruments admitted to trading on a non-EU regulated market: UBS may act as a market maker save that where this activity is carried out in the US in accordance with the definition given to it by the relevant laws and regulations, such activity will be specifically disclosed in this document. UBS may have issued a warrant the value of which is based on one or more of the financial instruments referred to in the document. UBS and its affiliates and employees may have long or short positions, trade as principal and buy and sell in instruments or derivatives identified herein; such transactions or positions may be inconsistent with the opinions expressed in this document.

Within the past 12 months UBS may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.

Please note that all transactions conducted by UBS are consistent with sanctions regulations imposed by Switzerland, the European Union, the United Nations, the United Kingdom and the United States, per UBS' global sanctions policy. UBS opinion as to future investment worthiness assumes no new sanctions are imposed.

US persons are prohibited from purchasing or selling securities of certain companies designated as being associated with the Chinese Military in accordance with the amended US Presidential Executive Order 13959.

Options and futures are not suitable for all investors, and trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "Characteristics and Risks of Standardized Options". You may read the document at <https://www.theocc.com/about/publications/character-risks.jsp> or ask your financial advisor for a copy.

Investing in structured investments involves significant risks. For a detailed discussion of the risks involved in investing in any particular structured investment, you must read the relevant offering materials for that investment. Structured investments are unsecured obligations of a particular issuer with returns linked to the performance of an underlying asset. Depending on the terms of the investment, investors could lose all or a substantial portion of their investment based on the performance of the underlying asset. Investors could also lose their entire investment if the issuer becomes insolvent. UBS does not guarantee in any way the obligations or the financial condition of any issuer or the accuracy of any financial information provided by any issuer. Structured investments are not traditional investments and investing in a structured investment is not equivalent to investing directly in the underlying asset. Structured investments may have limited or no liquidity, and investors should be prepared to hold their investment to maturity. The return of structured investments may be limited by a maximum gain, participation rate or other feature. Structured investments may include call features and, if a structured investment is called early, investors would not earn any further return and may not be able to reinvest in similar investments with similar terms. Structured investments include costs and fees which are generally embedded in the price of the investment. The tax treatment of a structured investment may be complex and may differ from a direct investment in the underlying asset. UBS and its employees do not provide tax advice. Investors should consult their own tax advisor about their own tax situation before investing in any securities.

Important Information About Sustainable Investing Strategies: Sustainable investing strategies aim to consider and incorporate environmental, social and governance (ESG) factors into investment process and portfolio construction. Strategies across geographies approach ESG analysis and incorporate the findings in a variety of ways. Incorporating ESG factors or Sustainable Investing considerations may inhibit the portfolio manager's ability to participate in certain investment opportunities that otherwise would be consistent with its investment objective and other principal investment strategies. The returns on a portfolio incorporating ESG factors or Sustainable Investing considerations may be lower or higher than portfolios where ESG factors, exclusions, or other sustainability issues are not considered by the portfolio manager, and the investment opportunities available to such portfolios may differ.

Within the past 12 months UBS Switzerland AG, its affiliates or subsidiaries may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.
